¹*Citrobacter freundii* complex includes *C. braakii*, *C. freundii*, *C. gillenii*, *C. murlinae*, *C. rodentium*, *C. sedlakii*, *C. werkmanii*, and *C. youngae*

²*Enterobacter cloacae* complex includes *E. asburiae*, *E. cloacae*, *E. hormaechei*, *E. kobei*, and *E. ludwigii*

³*Klebsiella pneumoniae* group includes *K. pneumoniae* and *K. variicola*

IR: Intrinsically resistant

^DTetracycline susceptibility predicts doxycycline and minocycline susceptibility. However, tetracycline non-susceptible isolates may be doxycycline or minocycline susceptible

^UOnly isolates from urine are tested, which is less than the total number of isolates listed

Note: Organisms with <30 isolates will not be represented due to lack of statistical validity and large confidence intervals

Gram-Positive Bacteria (% Susceptible)

| Microorganism | Isolates | GentamicinSynergy ^B | Ampicillin | Penicillin | Levofloxacin ^U | Tetracycline ^{D, U} | Doxycycline | Linezolid | Daptomycin | Vancomycin | Nitrofurantoin ^U |
|------------------------------|----------|--------------------------------|------------|------------|---------------------------|------------------------------|-------------|-----------|------------|------------|-----------------------------|
| <i>Enterococcus faecalis</i> | 439 | 71 | 99 | 99 | 70 | 19 | 40 | 99 | 96 | 96 | 100 |
| <i>Enterococcus faecium</i> | 47 | 89 | 27 | | 22 | 40 | 59 | 100 | 100 | 55 | |

| Microorganism | Isolates | Oxacillin ^A | Ciprofloxacin ^C | Moxifloxacin | SXT | Tetracycline ^D | Doxycycline | Clindamycin | Erythromycin | Linezolid | Daptomycin | Vancomycin | Nitrofurantoin ^U |
|--|----------|------------------------|----------------------------|--------------|-----|---------------------------|-------------|-------------|--------------|-----------|------------|------------|-----------------------------|
| <i>Staphylococcus aureus</i> (total) | 179 | 46 | 37 | 43 | 89 | 77 | 92 | 72 | 40 | 100 | 100 | 100 | 100 |
| Methicillin-susceptible <i>Staphylococcus aureus</i> | 88 | 100 | 70 | 72 | 97 | 93 | 97 | 76 | 62 | 100 | 100 | 100 | 100 |
| Methicillin-resistant <i>Staphylococcus aureus</i> | 101 | 0 | 5 | 10 | 79 | 62 | 87 | 68 | 19 | 100 | 100 | 100 | 100 |

^AOxacillin resistant *Staphylococcus* species are considered resistant to other beta-lactam agents including penicillins, beta-lactam combination agents, cephalosporins (with the exception of ceftaroline), and carbapenems

^BFor treatment of blood isolates only

^CCiprofloxacin interpretations are inferred from levofloxacin MIC testing

^DTetracycline susceptibility predicts doxycycline and minocycline susceptibility. However, tetracycline non-susceptible isolates may be doxycycline or minocycline susceptible

^UOnly isolates from urine are tested, which is less than the total number of isolates listed

Note: Organisms with <30 isolates will not be represented due to lack of statistical validity and large confidence intervals
