

Factor XIII Testing Update

FACTOR XIII TESTING UPDATE

Factor XIII Screen (Urea Solubility Screen) is no longer performed at Wisconsin Diagnostic Laboratories. To screen for a Factor XIII deficiency, we recommend the **Factor XIII Activity Screen**, which is a quantitative chromogenic assay performed at our reference laboratory and orderable in EPIC. This quantitative screen shows superior sensitivity to mild and moderate deficiencies, compared to the Urea Solubility Screen.

Ordering Information:

Test Name	Mnemonic	Test Code	CPT Code
Factor XIII Activity	FACT 13	3555705	85290

For questions, please contact Wisconsin Diagnostic Laboratories Coagulation department:
