Hepatitis B Surface Antibody Testing Update

Effective November 23, 2020, Hepatitis B Surface Antibody testing will now display a quantitative as well as qualitative result.

Reference Interval:

- Nonreactive: <8.5 mIU/ml
- Equivocal: ≥8.5 mIU/mL to <11.5 mIU/mL
- Reactive: ≥11.5 mIU/mL

Interpretive Data:

- Nonreactive: Hepatitis B Surface antibody titer <8.5 mIU/ml, suggesting lack of immunity to Hepatitis B.
- Equivocal: Sample is equivocal for Hepatitis B surface antibodies. Suggest re-testing if clinically indicated.
- Reactive: Hepatitis B Surface antibody titer is >=11.5 mIU/mL, suggesting immunity to Hepatitis B through either vaccination or natural infection.
